

The Conductor — Email Bridge Architecture

Better Rail Discord • Inbound & Outbound Email Integration

STATELESS • \$0 / MO

SYSTEM INTERACTION FLOW

DISCORD • RESEND INBOUND • RESEND OUTBOUND

KEY ARCHITECTURAL PROPERTIES

⚡ 100% Stateless & Safe

Zero database or external cache. Primary mailbox is untouched. Thread ID is encoded in [#id] in Subject and headers. Context is read from the first Discord message.

💰 \$0 / Month Running Cost

Resend free tier provides 3,000 emails/month for inbound and outbound. No external workers or paid databases required. Runs on existing Railway container.

🔒 Privacy & Internal Discussion

Normal messages in the thread remain internal team conversation. Only messages explicitly triggered via the `/reply` slash command are dispatched back to the customer.

📎 Rich Media & Long Text Handling

Attachments & photos upload directly into the Discord thread. Messages exceeding Discord's 2,000-character limit are automatically chunked into sequential messages, plus embedded as attachments.
